

Unit of code - reuse

## Signature of a Function

{  
 → name  
 → No. of parameter  
 → Type of parameter  
 }  
 → Return type

Void → start  
 myFun ( ) → name  
 { → Parameter  
 } → end  
 Body {  
 } → Code

```
float sum (int i, int j)
{
```

```

{
  int DSum (int i, int j)
  {
    i *= 2;
    j *= 2;
    return i + j;
  }
}

```

main ( )

```

→ {
  int a {10}, b {20}

```

```

  ↓
  int s = DSum (a, b);

```

Passing by Value

```

}

```

```

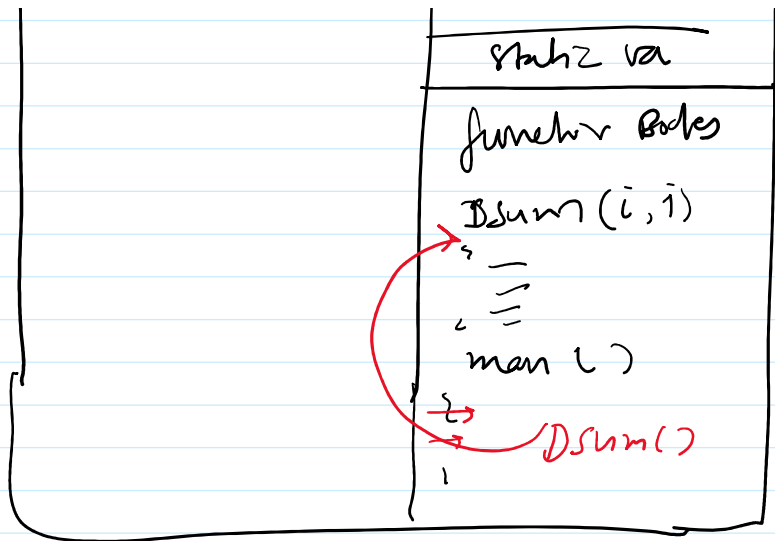

main ( )
{
  → sum (10, 20); 30
  int s = sum (10, 20); 30
}

```

Stack Memory	
i	a
<del>10</del>	10
<del>j</del>	b
<del>20</del>	20
<del>s</del>	i
<del>30</del>	10
s	j
30	20
	<div style="border: 1px solid red; padding: 2px;">s</div>
	<div style="border: 1px solid red; padding: 2px;">30</div>

## App Memory

Stack Memory	Global & Static var

## References

A reference is an alias / another name of a variable.

→ `int i {20};`

`int& k {i};` , `int& k = i;`

abc

(1) Range based for loop

`int arr {1, 2, 3, 4, 5};`

`for (auto& x : arr)`

`{`  
`x += 2;`

`cout << x << " " << arr[i++];`

`}`

`3, )`

(2) function params — Pass by Ref

`P, / int& i`    `int& i`

Stack

f1(int i, int j)

```

{
    i += 2;
    j += 2;
    cout << i << " " << j;
}

```

→ f2()

```

{
    int x {10}, y {20};
    → f1(x, y);
}

```

cout << x << " " << y;

```

f()
{
    int x {10};
    x = DoTenTimes(x);
}

```

```

int DoTenTimes(x)
{
    return x * 10;
}

```

```

{
    int i;
    int x {5};
    int i {10};
    const int x {5};
}

```

① ++ ✓  
cout << j;

count < j)

const int i

const int j

f(~~int~~ i, ~~int~~ j)

}

count = count + 1;

}

f(const int i, const int j)

}

};
